Subject: CFAC three week update January 05, 2016

On January 05, 2016 the DEQ received the most recent update from Carl Burnham of IRS Environmental on the quantity of Asbestos material removed from the CFAC site to date. The current cumulative total of 28,340 pounds of regulated asbestos waste remains steady from the last update as no regulated asbestos removal is currently underway at this site. The waste disposal receipts for December indicate the removal of an additional 43,5000 pounds of non-regulated asbestos material, yielding a "to date" non-regulated asbestos total of 454,180 pounds. Structures previously included in this removal include the West Rectifier, Rod Mill Building, Paste Plant, Quonset Hut, West Aluminum Unloader, and Compressor Building. The December removal accounts for materials solely in the East Rectifier and Potline Complex (including anodes).

An asbestos project permit is in place through 2016 for the East Rectifier building. Demolition notifications remain in place for the East and West Rectifiers, Rod Mill Buildings and the Paste Plant. Indications are that this "selective" demolition in order to facilitate forward progress on access will continue through the winter as weather permits.
